

Go Electro

Gas-Free Mobility

words by Jeremiah Shaw

The Optibike (\$5,500)

Now this is *definitely* an invention for Houstonians. This Cadillac of electric-powered bicycles features a sleek design, disc brakes, a forgiving suspension and a runtime of about 2 hours before it requires a recharge. After all, why bother with the hassle of actually pushing your bicycle along, via foot pedals like some kind of caveman, when you can just strap an engine to it and blast through next year's MS-150 at a perspiration-free 30 mph? Available online at electriccyclery.com.

ELECTRIC
PEDAL LAND

eGo Cycle LX (\$1,550)

This is the eGo, and while Freud might not have had this electric-powered cycle in mind when creating his psychoanalytical structural theory, he probably should've. It certainly looks a damn sight cooler than those simplistic iceberg "Superego/Ego/Id" visual aids. The eGo weighs in at a svelte 132 pounds, is capable of carrying a lineman from the Texans and runs for roughly an hour at a top speed of 24 mph, which is twice as fast as necessary if you live on the west side, and have to take what's left of I-10 everywhere you go. Available online at electriccyclery.com.

E-CRUISIN'
TO
YOUR SHRINK

Available online at electriccyclery.com.

The Electric Skateboard (\$420)

What do permanent markers, condoms and Tom Selleck all have in common? Right. They're all "Magnums." Now, add battery-powered skateboards to that distinguished list. The "44 Magnum" from Electric Cyclery features oversized wheels for stability on rough pavement, a 15 mile range and a 400 watt engine capable of going from 0-20 in 4 seconds. And if, for whatever reason, you decide to take this on a halfpipe, all we ask is that you please, please, please videotape it and send us a copy. Available online at electriccyclery.com.

24 FOOT TRANSITIONS
NO PROBLEM!

X1R Remote-Controlled Caddy (\$1,995)

Golf carts have become passé, friends. There's no longer a point to toting your bags around in that little white cart and losing out on the health benefits of walking the distance between each of your double-bogies. Instead, pick up the X1R remote-controlled caddy from Stewart Golf (at the bargain price of \$1,995), and let the other Cinderella boys glare with envy as they're schlepping their own bags around. For added fun, pimp it out with some off-road tires and send it tearing through the sand traps. Available online at stewartgolfusa.com.
